

**SOIL MANAGEMENT ENHANCEMENT (CSP Enhancements) January 2005**  
**Colorado Enhancement Activity Job Sheet S-2**

**Name:**

**Limiting or reducing field compaction**

Payments are calculated as follows

- = \$ 0.50 / acre / year with a STIR rating between 31 and 60
- = \$ 1.00 / acre / year with a STIR rating between 16 and 30
- = \$ 2.00 / acre / year with a STIR rating of 15 or less
- or
- = \$ 1.00 / acre / year using GPS guidance with a STIR rating between 31 and 60
- = \$ 2.00 / acre / year using GPS guidance with a STIR rating between 16 and 30
- = \$ 4.00 / acre / year using GPS guidance with a STIR rating or 15 or less

Use of reduced tillage and/or a tracking control system minimizes compaction that occurs in a cropped field. These tracking control systems may create permanent drive rows where all compaction will take place, thus creating areas of greater soil tilth with potential for increased crop production.

**Documentation Requirement:** Farmer or consultant certification that measures are in place for identified fields and documentation of STIR rating from RUSLE2.

Field Name or Tract and Field Number	Acres	Control System Used	Date Certified
T245 field 1,2,4,5 <b>Example</b>	160	GPS tramline	10/25/04

**I certify that the information provided above on tramline use is correct and accurate to the best of my knowledge.**
